Precision Wall Systems, Inc. has always been an environmentally conscious manufacturer utilizing mill and finished aluminum extrusion products.

Our suppliers of extruded aluminum use an average of 75% recycled aluminum (50% post industrial scrap and 25% post consumer scrap).

The paint line captures and incinerates approximately 99% of the Volatile Organic Compounds from the paint solvents.

Wastewater from the anodizing process is captured and processed through an in-house waste water treatment plant allowing the recirculation of this water.

Precision Wall Systems, Inc. is and will continue to be proactive in seeking processes that exceed EPA and Texas environmental requirements. We recycle all of our unused cardboard, wood products and aluminum waste.
